

## How to install a Gasket Retainer

- **Remove Old Track:** Slit the track with a razor knife down the center of the groove. The track will lift out in two pieces.
- **Install Replacement Track:** Cut the track to length with mitered corners. Slide the inside pan of the door into the slot on the "A" side of the track in the diagram above. With the track in the proper position in the corners, push down on the "B" side of the track to snap into place.
